

ddpFRAMEWORK|Description
ddpFRAMEWORK is a framework for the development of modern, modular windows applications, based on Microsoft's .NET technology. ddpFRAMEWORK is characterized by its highly flexible plug-in architecture and provides a clear software architecture based on loosely coupled components. This allows the re-use and the exchange of available plug-ins and therefore time- and cost-savings during the development of modular applications. The framework provides, in addition to a rich GUI library, different precasts, customizable standard dialogs and is responsible for the complete menu and window management.

M&M|About Us

M&M is a company dealing with information technology in the world of industrial automation. Well known German and international customers, who develop state of the art technologies, who have complex architectural systems and who need in-depth consultancy services prior to development projects, frequently call on the services of M&M Software GmbH.

→ ddpFRAMEWORK|Features

- Easy modular applications development
- Provides a clear software architecture
- Software product line development platform
- Seamless integration of components into the menu structure
- User customizable GUI
- Multi language support
- Individual brand labeling support
- Further development by M&M Software
- Integration in Visual Studio 2005 / 2008
- Project wizard for the easy creation of new projects
- Update wizard for easy updating of existing projects

→ ddpFRAMEWORK|Advantages

- Simplifies the re-use of components
- Supports distributed development
- Manages the entire menu and window structure
- Short familiarization time
- Individual components can be developed and implemented independently
- Proven platform for own applications
- Reduces development time and costs
- Easy maintenance
- Unlimited possibilities for extensibility
- M&M in house support and training available
- Certified for Windows Vista
